

## LAB-10

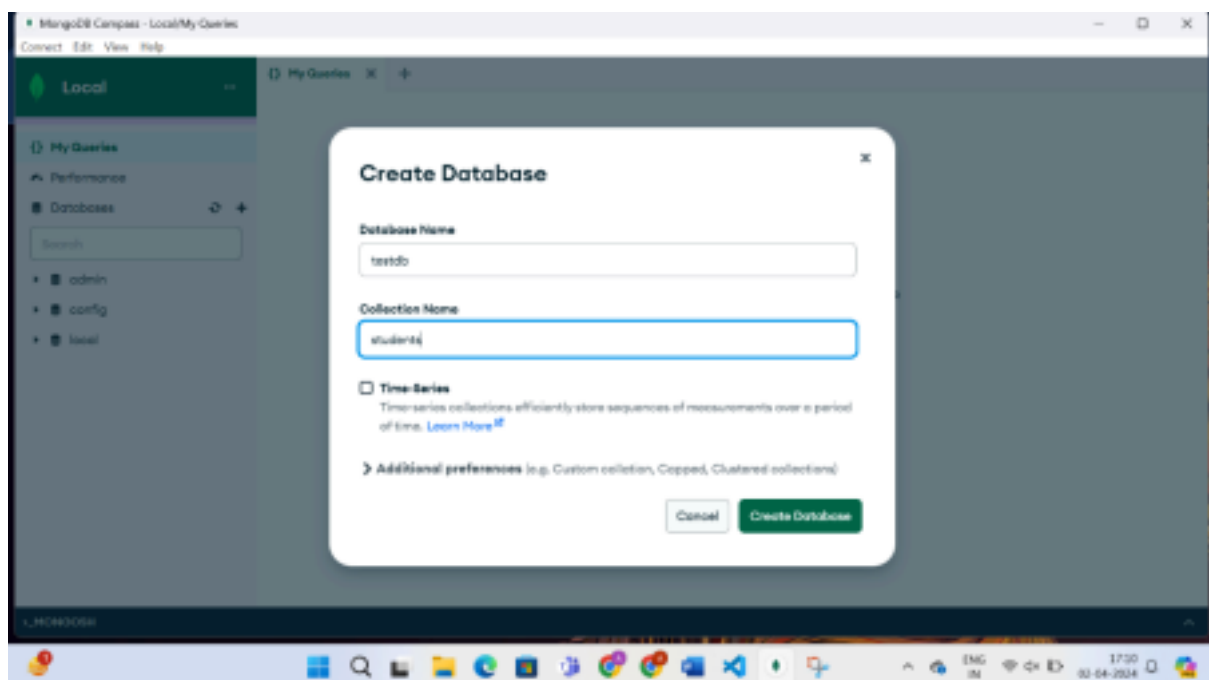

Connect to a MongoDB server using MongoDB Compass.

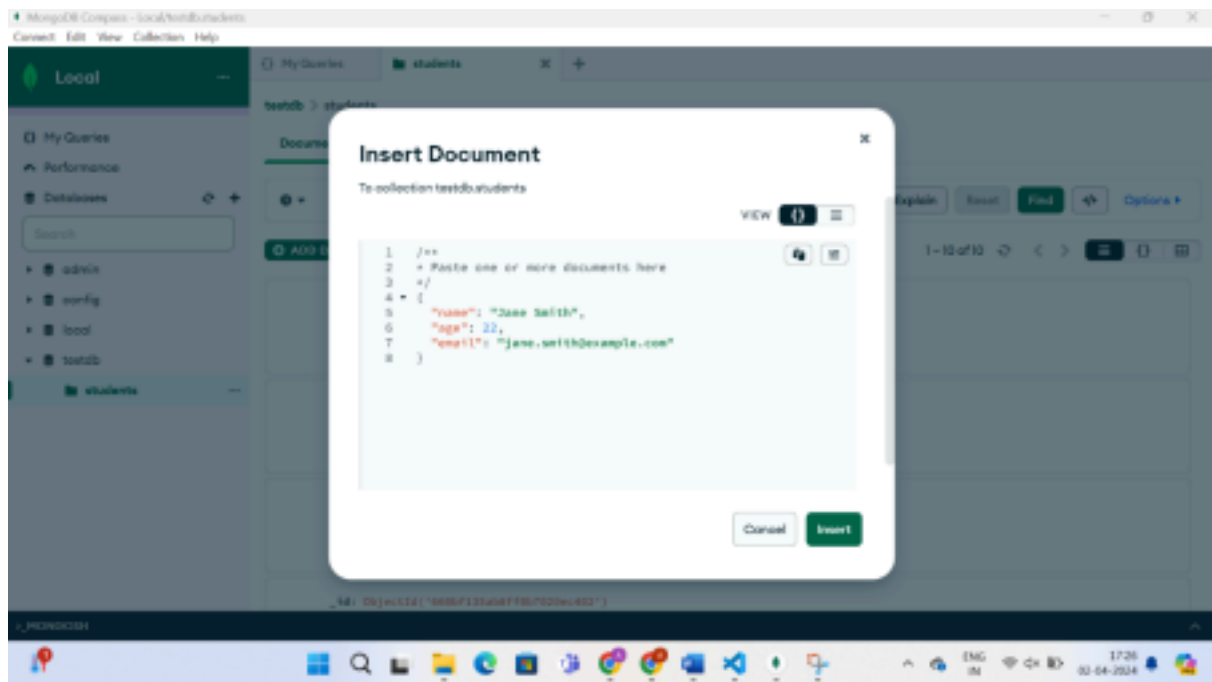

Create a new database named "testdb" in MongoDB Compass.

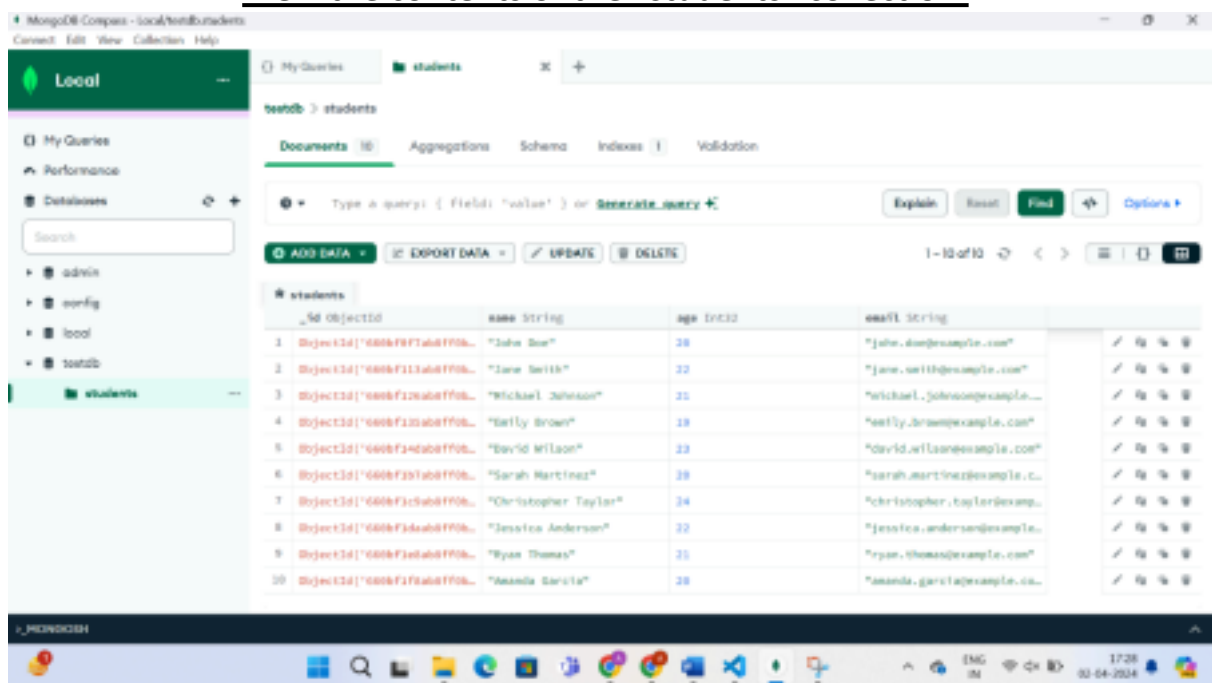

**Create a new collection named "students" in the "testdb" database.**

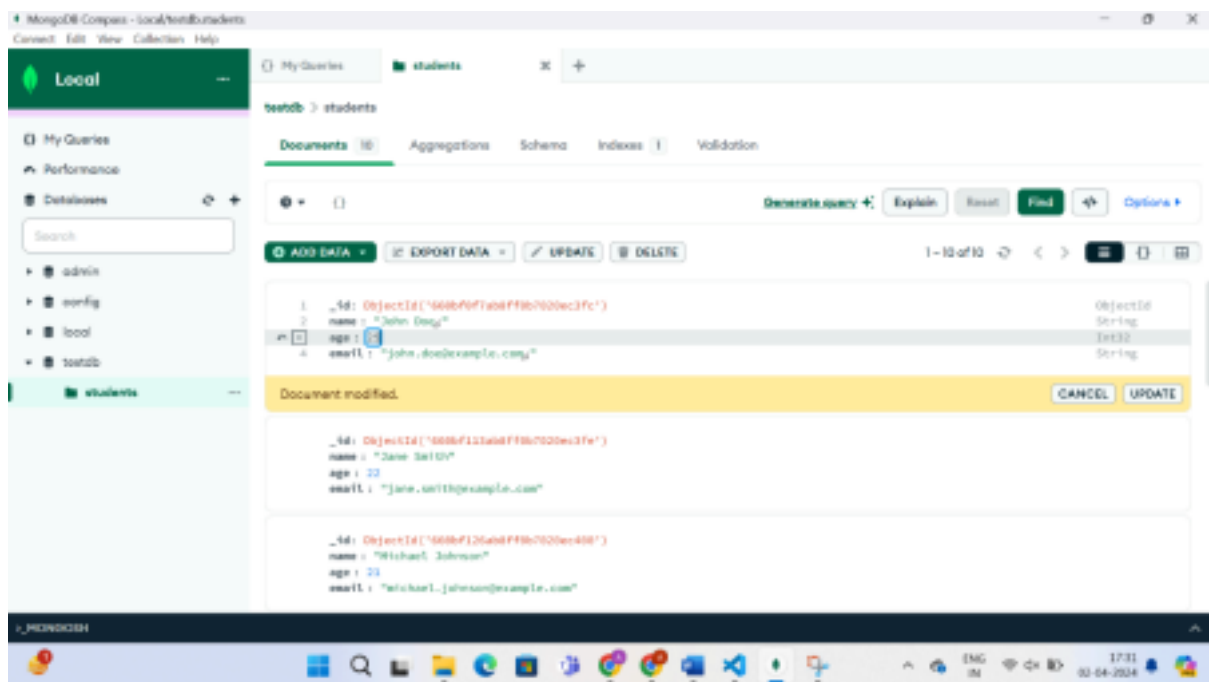

**Insert ten documents into the "students" collection with the following fields: name, age, and email.**

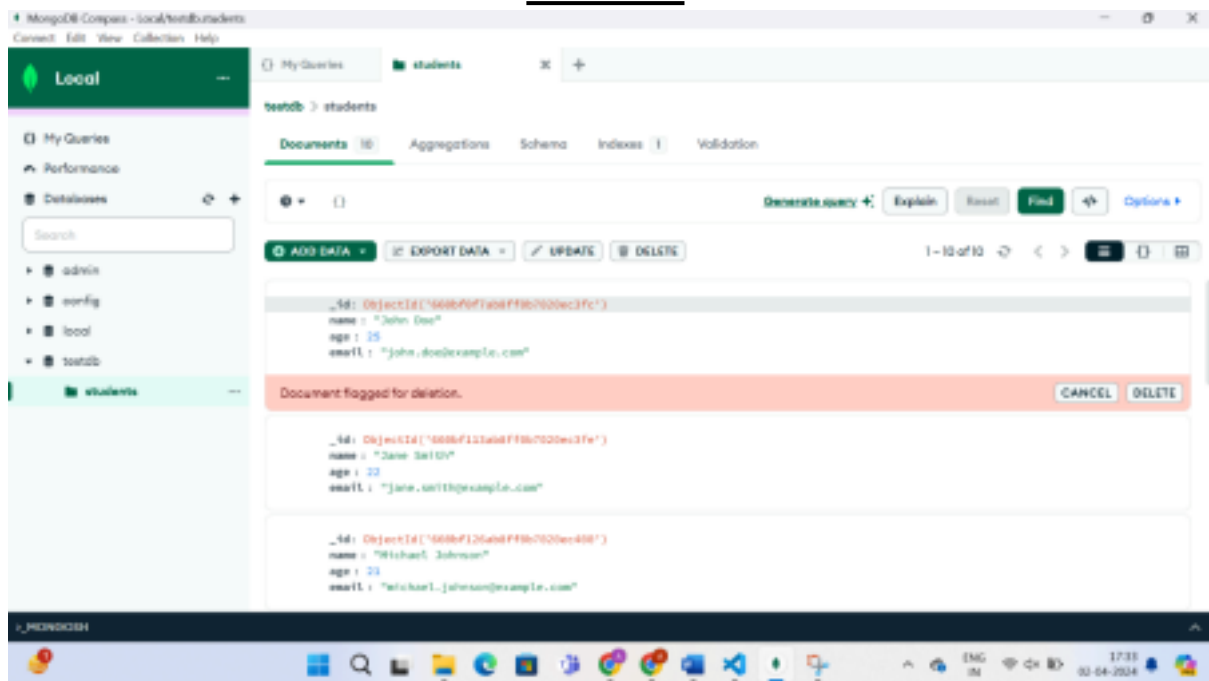

View the contents of the "students" collection.

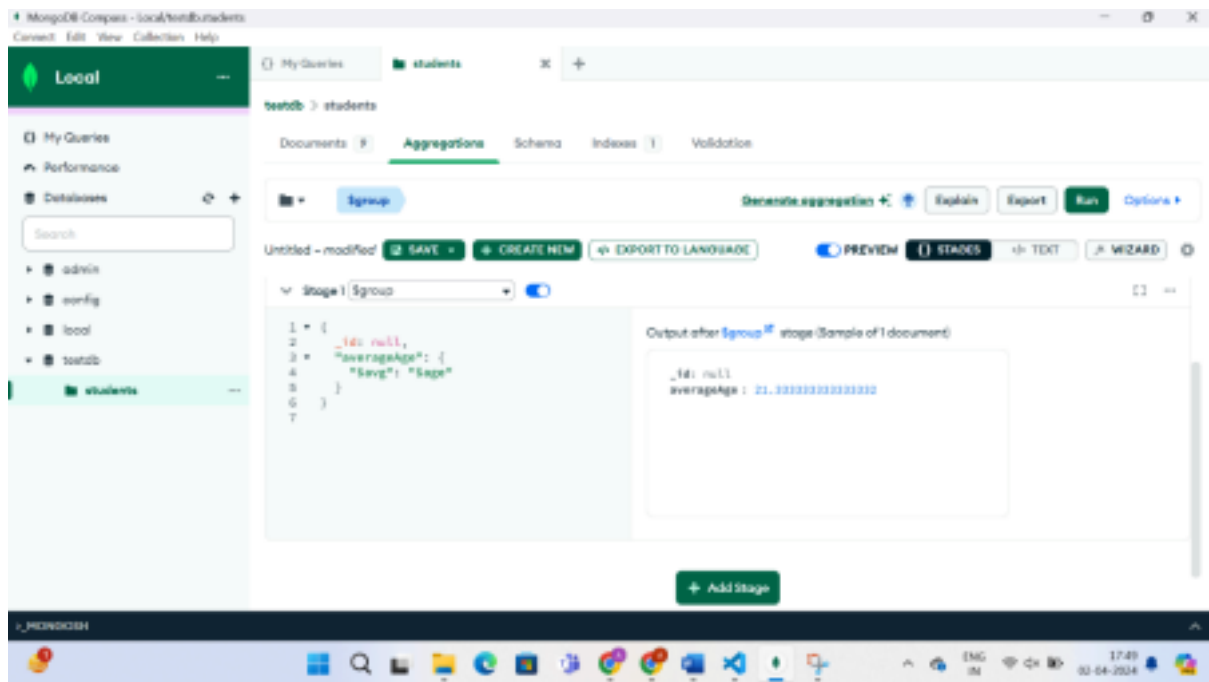

Update the age of a specific student in the "students" collection.

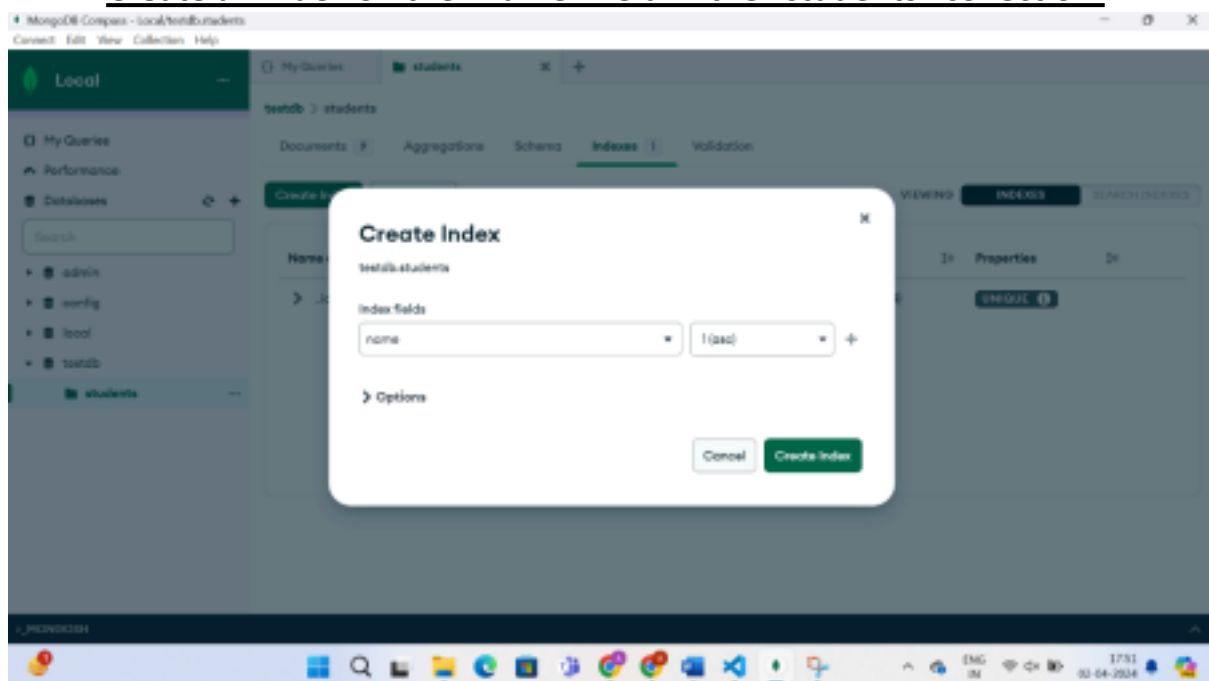

**Delete a document from the "students" collection based on a specific condition.**

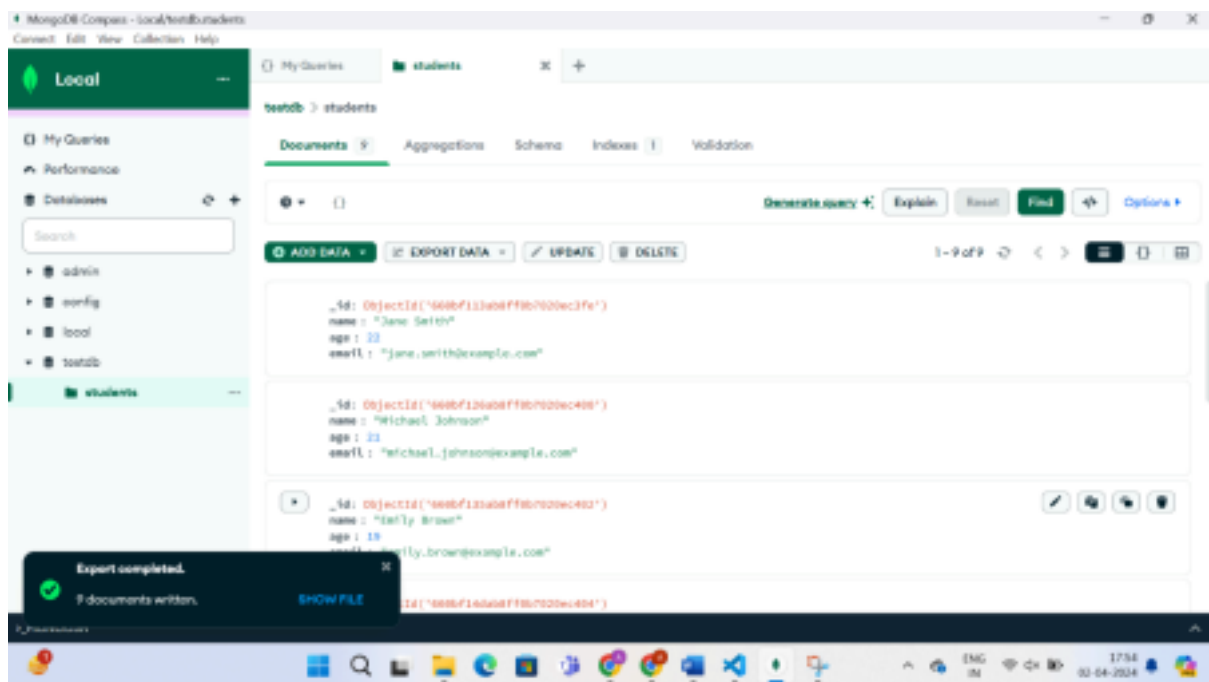

**Use the aggregation pipeline to calculate the average age of all students in the "students" collection.**

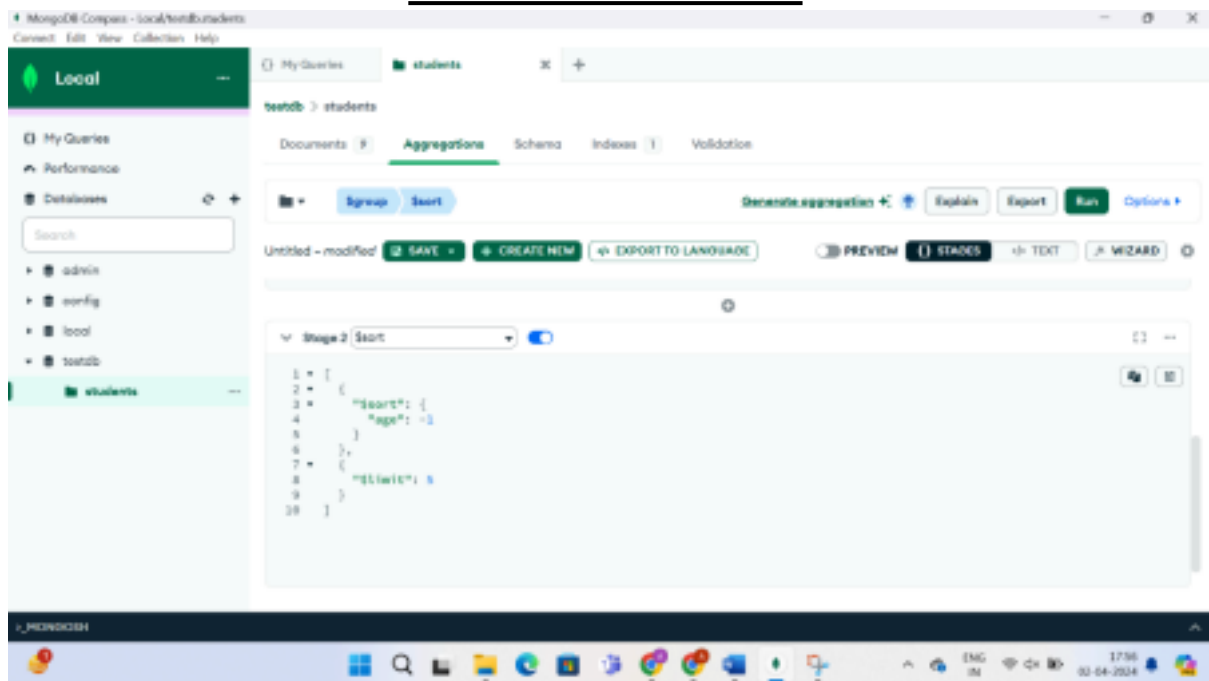

Create an index on the "name" field in the "students" collection.

Export the contents of the "students" collection to a JSON file.

**Perform a complex aggregation operation to find the top 5 oldest students in the "students" collection.**

**Create a geospatial index on a field representing the location of students.**

MongoDB Compass - local/testdb/students
